

## A SIMPLER WORLD

23 MAY 2018 | IN PEOPLE

**Design Week** in Milan was the international stage chosen by [DiCEworld](#), a company of [Gruppo ABenergie](#), to present [DiCE](#), the new **IOT** Internet of Things system that revolutionizes management of electrical energy, helping Italians to gain greater awareness of consumption for more sustainable living.

DiCE, created by the architect and designer [Marco Acerbis](#), is a simple, almost **archetypal object** that can fit into any context, making it possible to constantly monitor **energy consumption** in the home or office, through the use of simple, intuitive devices.
